Energy-saving fans K1G 250 and W1G 250

Ideal solutions for refrigerated display cases.

The engineer's choice

Economical refrigeration day in, day out.

Compact energy-saving fans for refrigerated and freezer cabinets:

Energy efficiency has become one of the most important topics in virtually all areas of life. Air conditioning and refrigeration systems in particular tend to be in operation for long periods and so offer tremendous potential for saving energy. Powerful **GreenTech EC motors** from ebm-papst provide the best possible basis. This is exemplified by the new energy-saving fans **W1G 250 and K1G 250**, which already have a proven track record as size 200 respectively 230 versions.

The W1G product range is intended for **installation under the shelves of refrigerated and freezer cabinets**. By contrast, the new K1G range was specially designed for the **back wall of refrigerated displays**, where installation space is often at a premium. Thanks to its extremely shallow design, it even fits into small gaps and so permits optimum operation.

All the advantages at a glance:

Optimized for refrigerated cabinets

Reduced heat loss saves even more energy — with a life expectancy surpassing 40,000 hours. The compact design ensures space-saving and above all simple installation.

Groundbreaking EC technology

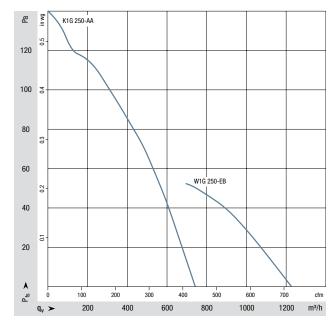

Motor speeds can be adjusted by way of a programming interface or controlled as required during operation with the aid of the optional ESM plug-in module.

Ready-to-connect Plug & Play unit

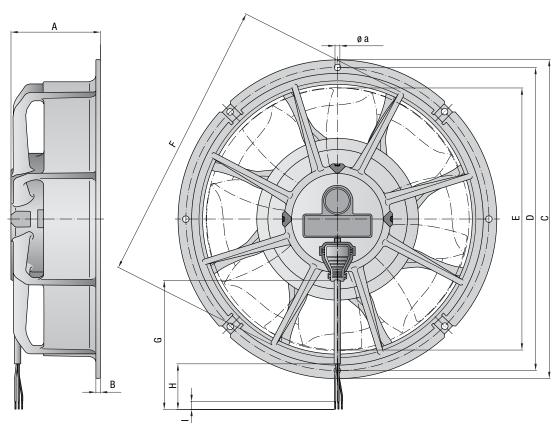

All the components are perfectly matched!

Compact, smart and ready for economical continuous operation.

Top performance, minimum space.

Nominal data			Nominal voltage range	Frequency	Speed	Max. power consumption	Max. input current	Perm. ambient temperature	Weight
Item number		Motor	VAC	Hz	rpm	W	A	°C	kg
W1G 250-EB17-01	EC	M1G055-BI	1~230 V	50/60	1700	35	0.28	-30+50	1.2
