

EC centrifugal fans - RadiPac

Edition 2017-07

ebm papst

The engineer's choice

RadiPac: Now complete

The ebm-papst RadiPac EC centrifugal fan series is now complete.

With this catalog, you get the technical documentation for the entire RadiPac family. Some new models have been added and are described briefly below.

The RadiPac standard

These are the fans in sizes 250 to 1000; sizes 250 and 280 are equipped with impellers made of high-quality, injection-molded composites.

Sizes 310 to 1000 include the high-efficiency aluminum impeller with airfoil blades.

This series is designed for maximum efficiency, efficiency thus far unmatched in this breadth by our competitors.

RadiPac with active PFC

Sizes 450, 500 and 560 are now available with the new three-phase 3 kW motor with integrated active PFC.

With these products, we can now fulfill the increasingly frequent requests for total harmonic distortion of no more than 5%.

RadiPacs with new 150 motor

Sizes 450, 500 and 560 have been equipped with the new M3G 150 third-generation (Gen. III) motors. These models have been optimized for minimum installed height for use in tight spaces.

The new RadiPacs stand out with the following features:

- Best overall efficiency
- Comfortable noise level
- Compact design
- Fast availability
- Easy startup with uncomplicated configuration of control electronics
- Finely tuned system with pre-configured motor / control electronics / impeller unit
- Plug & play: fully pre-assembled unit ready to install
- Single source: one contact for everything
- Logistic advantages due to complete unit
- Complete product line without gaps
- No magnets with rare earths

All products in this catalog are grouped together in a collection in our product selection program, FanScout. We can provide you with this collection on request.

Contents

RadiPac: Now complete	2	RadiPac - compact version (\varnothing 280 - \varnothing 450):	84
About ebm-papst	4	Aluminum impeller with backward-curved blades; without rotating diffusor on fan outlet. For optimum compactness in all directions.	
Product- & characteristic curves overview	6		
RadiPac - standard (\varnothing 250 - \varnothing 1000): \varnothing 250 and 280 with composite impellers. \varnothing 310 to 1000 use the high-efficiency aluminum impeller with airfoil blades. \varnothing 450, 500 and 560 with motors with integrated active power factor correction.	10	RadiPac - ATEX version (\varnothing 400 - \varnothing 630): Aluminum impeller with backward-curved blades combined with EC motor with explosion protection according to EN 60079-0.	90
 		Technology:	
RadiPac - short version (\varnothing 450 - \varnothing 560): Combination of aluminum impellers with airfoil blades with the M3G150 third-generation (Gen. III) motor. For minimum installed height.	76	- Tender specifications	100

About ebm-papst

As technological leader for ventilation and drive engineering, ebm-papst is in demand as an engineering partner in many industries. With over 15,000 different products, we provide the right solution for just about any challenge. Our fans and drives are reliable, quiet and energy-efficient.

Six reasons that make us the ideal partner:

Our systems expertise.

You want the best solution for every project. The interrelationships between ventilation and drive engineering must thus be considered as a whole. And that's what we do – with **motor technology** that sets standards, sophisticated **electronics** and **aerodynamic designs** – all from a single source and perfectly matched. These system solutions release unique synergies worldwide. And in particular – they relieve you of a lot of work, so that you can concentrate on your core competency.

The ebm-papst spirit of invention.

In addition to our wide range of products, we are always able to develop customized solutions for you. A diversified team of 600 engineers and technicians works at our three locations in Germany: Mulfingen, Landshut and St. Georgen. Contact us to discuss your next project.

Our lead in technology.

As pioneer and trail-blazer for developing highly efficient EC technology, we are way ahead of other motor manufacturers. Almost all our products are also available with GreenTech EC technology. The list of benefits is long: higher efficiency, maintenance-free, longer service life, sound reduction, intelligent control characteristics and unrivalled energy efficiency with savings of up to 80 % compared to conventional AC technology. Let our technology be your competitive advantage as you lead in your industry.

Closeness to our customers.

ebm-papst has 25 production locations worldwide (including facilities in Germany, China and the USA), together with 49 sales offices, each of which has a dense network of sales representatives. You will always have a local contact, someone who speaks your language and knows your market.

Our standard of quality.

Of course you can rely on the highest standards of quality with our products. Our quality management is uncompromising, at every step in every process. This is underscored by our certification according to international standards including DIN EN ISO 9001, TS declaration of conformity and DIN EN ISO 14001.

Our sustainable approach.

Assuming responsibility for the environment, for our employees and for society is an integral part of our corporate philosophy. We develop products with an eye to maximum environmental compatibility, in particular resource-preserving production methods. We promote environmental awareness among our young staff and are actively involved in sports, culture and education. That's what makes us a leading company – and an ideal partner for you.

The story of our success to market and technology pioneer.

- 1963 Founding of **Elektrobau Mulfingen GmbH & Co. KG** by Gerhard Sturm and Heinz Ziehl.
- 1965 First tubeaxial fan developed in EC/DC technology.
- 1966 ebm's success takes off with the new 68 motor.
- 1972 The first ebm foreign subsidiary is established in Sweden.
- 1988 Gerhard Sturm is awarded the Federal Cross of Merit.
- 1990 The sixty-millionth external-rotor fan is produced.
- 1992 Acquisition of **PAPST Motoren GmbH** in St. Georgen.
- 1997 Buyout of the **Landshut** (mvl) plant.
- 1998 Development of first fans with integrated electronics.
- 2003 Change of name to **ebm-papst**.
- 2008 The **HyBlade®** range of fans sets new efficiency standards.
- 2010 **GreenTech** – our sign for energy efficiency and resource preservation.
- 2011 **RadiCal** defines a new standard for EC centrifugal fans.
- 2013 ebm-papst takes over the gearbox specialist Zeitlauf and wins the **German Sustainability Award**.
- 2014 Team partnership with Mercedes AMG PETRONAS Formula 1 team.
- 2015 **RadiPac** pushes the limits of efficiency.
- 2016 **AxiBlade** sets new standards in ventilation, refrigeration and air-conditioning.

Product- & characteristic curves overview – RadiPac

Standard, Ø 250 - Ø 1000

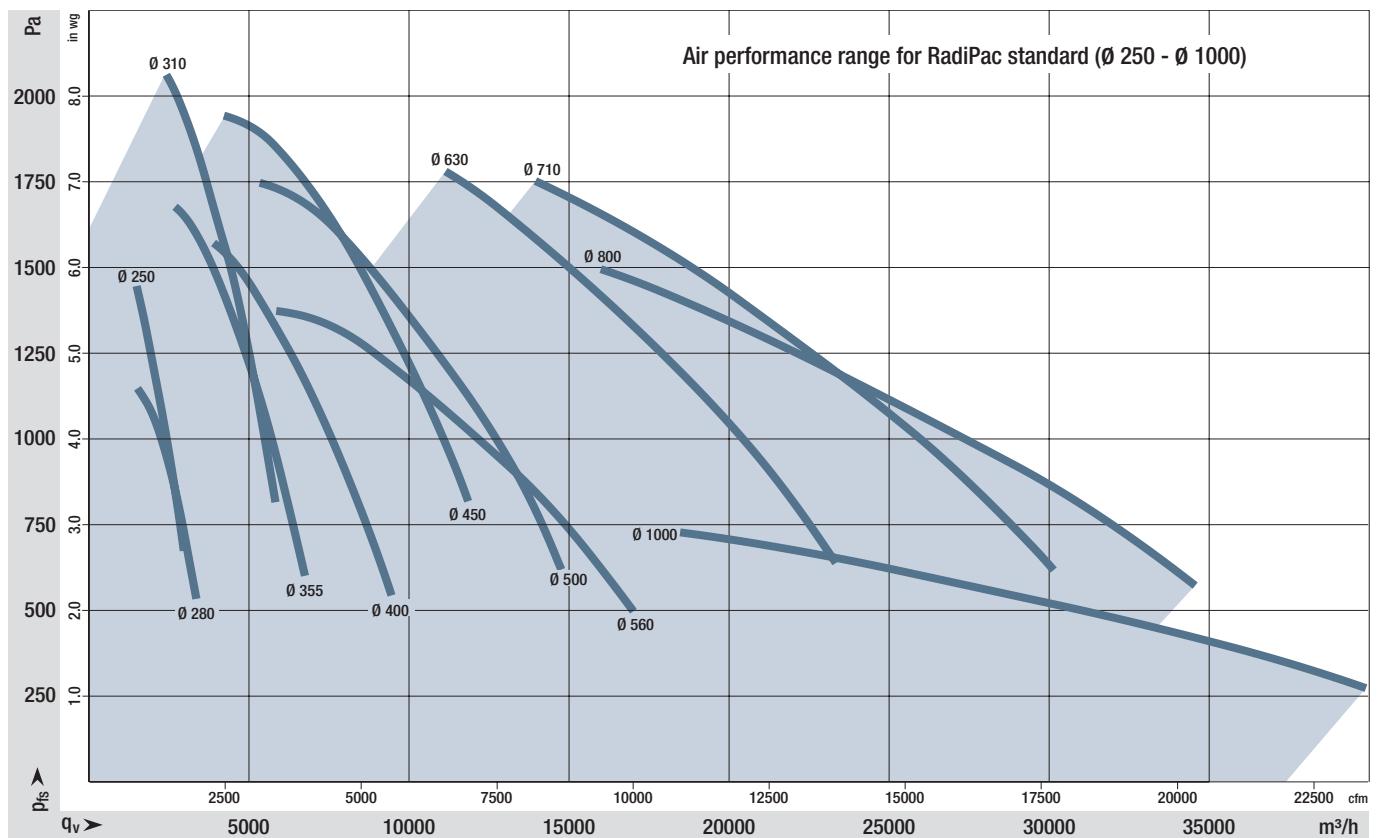

Type R3G... motor impellers are available in sizes 250 to 560 for all impeller/motor combinations. For sizes 630 to 800, these versions are only available in combination with the lightweight size 150 motor. Operation of a type R3G... motor impeller requires an inlet ring and a motor mounting of suitable dimensions to be provided by the customer.

Type K3G... centrifugal fans are also available in sizes 250 to 560 and for all impeller/motor combinations in a ready-to-install design with support struts for wall mounting. For sizes 630 to 800, these versions are only available in combination with the lightweight size 150 motor. The K3G "spider" design includes the motor impeller, a welded support strut assembly, an inlet ring and a square mounting plate.

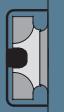

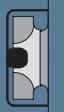

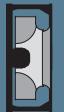

Type K3G... centrifugal fans with impeller diameters 630 to 1000 and the "large" size 200 motor are only available in the cube design intended for floor mounting. The struts are extruded aluminum profile, the corner joints are made of die-cast aluminum, and the motor mounting plate, the inlet ring and the nozzle plate are made of galvanized sheet steel. This version is not suitable for wall mounting.

The graph shows the maximum air performance for each size. If less performance is required, variants with smaller motors can be used. This saves additional costs. The right fan for every application!

Centrifugal module with support bracket and reversed mounting plate:

Type K3G... centrifugal fans are available in sizes 310 to 560 in an additional mechanical design with a reversed mounting plate.

In the standard versions (see pages 6-7), the circumferential chamfer on the mounting plate faces upstream. In the "reversed" version described here, the chamfer faces downstream.

Centrifugal module with support bracket / with cube design and corrosion protection:

The ready-to-install K3G... centrifugal fans in sizes 250 to 800 are also available in a version with enhanced corrosion protection.

In this version, all metal surfaces have an additional coating. The color used is black.

Data is subject to change without notice at ebm-papst discretion.

Short version:

In addition to the standard versions, size 450, 500 and 560 RadiPac centrifugal fans in the R3G (motor impeller) and K3G (modular) design variants are also combined with the third-generation M3G 150 motor. The result is a higher-performance version with additional functionality such as programmable inputs and outputs and an LED status indicator. Moreover, mounting the impeller on the base flange results in a lower installed height.

ATEX fans:

RadiPac centrifugal fans for use in potentially explosive atmospheres. These fans are available in sizes 400 to 630.

The combination of high-efficiency EC motor and integrated control electronics for use in potentially explosive atmospheres of Zones 1 and 2 is unique and simplifies the use of fans in such environments for the operator.

Data is subject to change without notice at ebm-papst discretion.

RadiPac - standard:

Type R3G... RadiPac motor impellers are available in sizes 250 to 560 for all impeller/motor combinations.

For sizes 630 to 800, these versions are only available in combination with the lightweight size 150 motor.

Operation of a type R3G... motor impeller requires an inlet ring and a motor mounting of suitable dimensions to be provided by the customer.

Type K3G... centrifugal fans are also available in sizes 250 to 560 and for all impeller/motor combinations in a ready-to-install design with support struts for wall mounting.

For sizes 630 to 800, these versions are only available in combination with the lightweight size 150 motor.

The K3G "spider" design includes the motor impeller, a welded support strut assembly, an inlet ring and a square mounting plate.

Type K3G... centrifugal fans with impeller diameters 630 to 1000 and the "large" size 200 motor are only available in the cube design intended for floor mounting.

The struts are extruded aluminum profile, the corner joints are made of die-cast aluminum, and the motor mounting plate, the inlet ring and the nozzle plate are made of galvanized sheet steel.

This version is not suitable for wall mounting.

EC centrifugal fans – RadiPac

backward curved, Ø 250

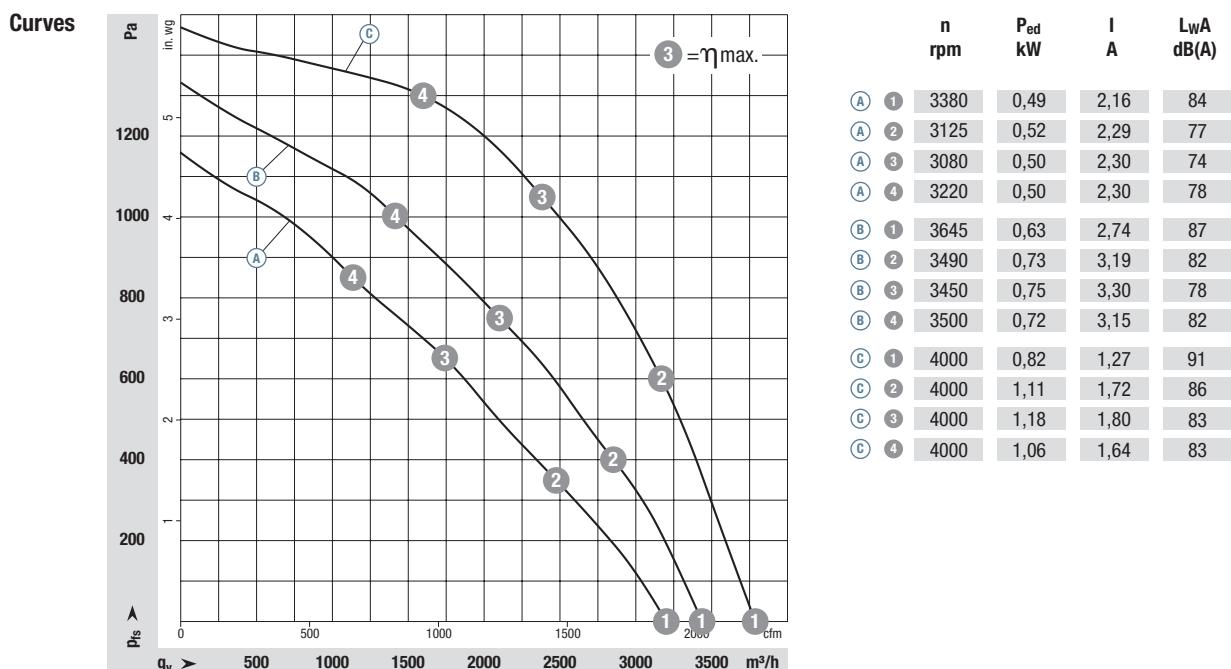

- **Material:** Support bracket: Steel, painted black
Support plate and inlet ring: Sheet steel, galvanized
Impeller: PP plastic
Rotor: Painted black
Electronics housing: Die-cast aluminium
- **Number of blades:** 6
- **Direction of rotation:** Clockwise viewed toward rotor
- **Degree of protection:** IP 55
- **Insulation class:** "F"
- **Installation position:** Shaft horizontal or rotor on bottom, rotor on top on request
- **Condensation drainage holes:** Rotor side
- **Mode:** Continuous operation (S1)
- **Mounting:** Maintenance-free ball bearings

Subject to change

(1) Nominal data at operating point with maximum load and 230 or 400 VAC.

Air performance measured according to: ISO 5801, installation category A, with ebm-papst inlet ring without contact protection.
Intake-side sound level: L_{WA} according to ISO 13347, L_{PA} measured at 1 m distance from fan axis. The values given are only applicable under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked in installed condition. See Page 126 ff. for detailed information.

- **Technical features:** See connection diagram P. 118 f.
- **EMC:** Interference emission according to EN 61000-6-3
 Interference emission according to EN 61000-6-3,
except EN 61000-3-2 for professionally used equipment
with a total rated power greater than 1 kW
 Immunity to interference according to EN 61000-6-2
 Circuit feedback according to EN 61000-3-2/3
- **Touch current:** <= 3,5 mA according to IEC 60990 (measuring circuit Fig. 4)
- **Cable exit:** Variable
- **Protection class:** I (with customer connection of protective earth)
- **Conformity with standards:** EN 61800-5-1, CE; EN 60335-1
- **Approvals:** C22.2 Nr.77 + CAN/CSA-E60730-1, UL 1004-7 + 60730
- **Efficiency:** Ecodesign EU regulation EU 327/2011

Subject to change

(1) Nominal data at operating point with maximum load and 400 VAC.

Air performance measured according to: ISO 5801, installation category A, with ebm-papst inlet ring without contact protection.
Intake-side sound level: L_{WA} according to ISO 13347, L_{PA} measured at 1 m distance from fan axis. The values given are only applicable under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked in installed condition. See Page 126 ff. for detailed information.

- **Technical features:** See connection diagram P. 116 ff.
- **EMC:** Interference emission according to EN 61000-6-3,
except EN 61000-3-2 for professionally used equipment
with a total rated power greater than 1 kW
 Immunity to interference according to EN 61000-6-2
- **Touch current:** <= 3,5 mA according to IEC 60990 (measuring circuit Fig. 4)
- **Terminal box design:** electrical connection via terminal strip
- **Protection class:** I (with customer connection of protective earth)
- **Conformity with standards:** EN 61800-5-1, CE
- **Approvals:** C22.2 Nr.77 + CAN/CSA-E60730-1, UL 1004-7 + 60730
 EAC
 EAC, UL, CSA

Air performance measured according to: ISO 5801, installation category A, with ebm-papst inlet ring without contact protection.
Intake-side sound level: L_{WA} according to ISO 13347, L_{PA} measured at 1 m distance from fan axis. The values given are only applicable under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked in installed condition. See Page 126 ff. for detailed information.

- **Technical features:** See connection diagram P. 116 f.
- **EMC:** Interference emission according to EN 61000-6-4
Immunity to interference according to EN 61000-6-2
- **Touch current:** <= 3,5 mA according to IEC 60990 (measuring circuit Fig. 4)
- **Terminal box design:** electrical connection via terminal strip
- **Protection class:** I (with customer connection of protective earth)
- **Conformity with standards:** EN 61800-5-1, CE
- **Approvals:**  EAC
  C22.2 Nr.77 + CAN/CSA-E60730-1, UL 1004-7 + 60730

Short version:

In addition to the standard versions, size 450, 500 and 560 RadiPac centrifugal fans in the R3G (motor impeller) and K3G (modular) design variants are also combined with the third-generation M3G 150 motor.

The result is a higher-performance version with additional functionality such as programmable inputs and outputs and an LED status indicator.

Moreover, mounting the impeller on the base flange results in a lower installed height.

Compact version:

RadiPac centrifugal fans in sizes 280 to 450 are also available as compact R3G motor impellers.

The aluminum impeller without airfoil blades and without radial diffusor has a very small footprint and is intended for use in single-inlet scroll or half-scroll housings.

Atmosphere Explosive.

The European guideline on explosion protection.

Certified safety.

ebm-papst's ex-protected fans are based on the proven 3 kW GreenTech EC external rotor motor and are tested and certified in line with the European product directive 2014/34/EU. They therefore meet all demands made of devices used in areas at risk of explosion. Our axial and centrifugal ex-protected fans are suitable for equipment group II (explosion-protected areas outside mining) and the gases and vapours substance group in explosion group IIB.

Our ex-protected fans can be used in hazard zones 1 and 2. They therefore correspond to category 2G (ATEX) and have the equipment protection level Gb (EN 60079-0).

As per the ATEX 1999/92/EC operating directive, the facility operator is responsible for the categorisation of hazard zones. The corresponding equipment categorisation is performed by the manufacturer, i. e. ebm-papst.

ATEX fans:

RadiPac centrifugal fans for use in potentially explosive atmospheres.

These fans are available in sizes 400 to 630.

The combination of high-efficiency EC motor and integrated control electronics for use in potentially explosive atmospheres of Zones 1 and 2 is unique and simplifies the use of fans in such environments for the operator.

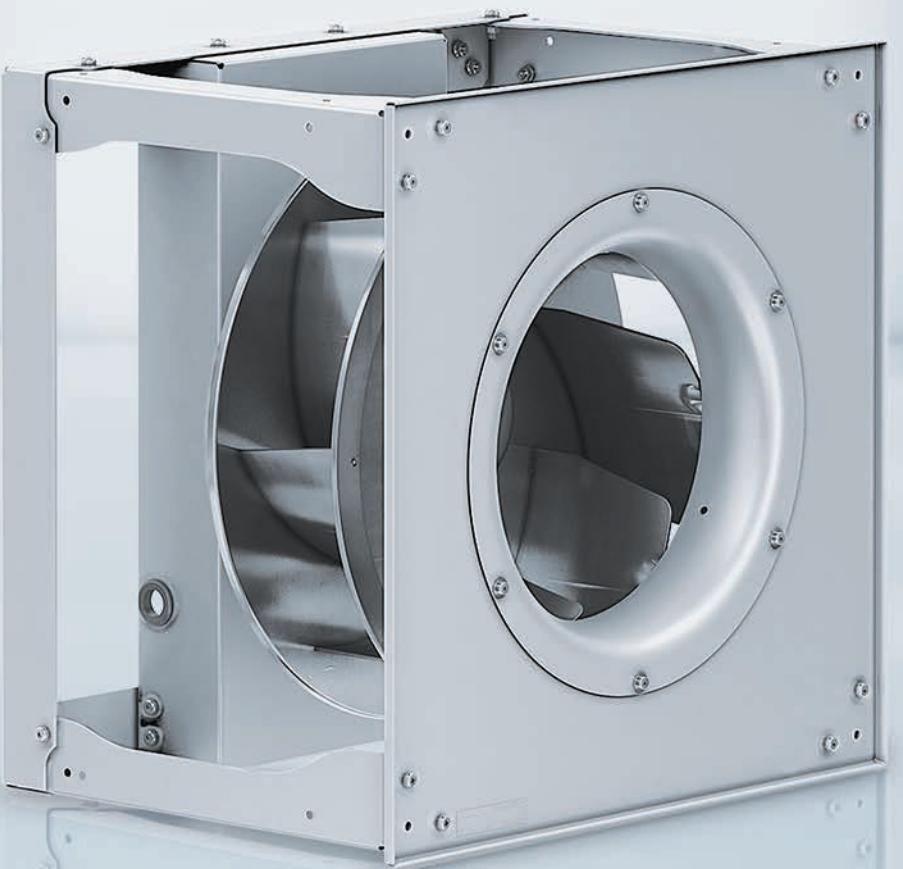

Ex marking of the ebm-papst fans as per ATEX and EN 60079-0:

Ex marking	Group	Equipment category	Ignition protection Typees			Explosion group	Temperature classes	Equipment protection level	Escape of gases, fog and vapours (e.g. ammonia, methane, ethane, propane, town gas, acrylonitrile, hydrogen sulphide, ethyl ether, acetaldehyde)
			Pressure-resistant enclosure Protection level	Increased safety Protection level	Intrinsic safety Protection level				
ebm papst		3G Corresponding to Zone 2	ic	IIA	T1 T2	Gc Increased protection	Zone 2 Hardly ever, rarely		
		II 2G Ex	db eb ib		IIB T3	Gb	Zone 1 Occasionally		
Required customer specification									
The following requirements are not covered:									
Not available		I 1G Corresponding to Zone 0	ia	IIC	T4 T5 T6	Ga Very high protection	Zone 0 Constantly, often

Tender specifications

Fan size 250 to 1000

Direct-drive single inlet centrifugal fans with backwards-curved high-performance centrifugal impellers with radial diffusers, mounted on a GreenTech EC external rotor motor with integrated control electronics.

Impeller made of aluminum, with 5 backwards-curved, continuously welded, hollow-profile blades; impeller sizes 250 and 280 made of plastic; flow-optimized inlet ring made of galvanized sheet steel with pressure test nipple.

Motor impeller statically and dynamically balanced on two planes to balancing grade G 6.3 (motor size 200 to balancing grade G 4.0) in accordance with DIN ISO 1940.

GreenTech EC external rotor motor surpasses efficiency class IE4, magnets with no rare earths, maintenance-free ball bearings with long-term lubrication, theoretical nominal service life of at least 40,000 hours of operation.

Soft start, integrated current limitation, extended voltage input 1~200-277 V, 50/60 respectively 3~380-480 V, 50/60 Hz. Fan can be used with all standard power supply networks with unaltered air performance. Integrated electronics, low-noise commutation logic; 100 % open-loop speed control; all fans have an RS485/MODBUS RTU interface, and do not need to be installed with shielded cables. All 1~ types have an integrated active PFC (Power Factor Correction) to reduce disturbing harmonic content. Terminal box made of aluminum/plastic with easily accessible connection area with spring-loaded terminals, environment-resistant cable glands, or with external variable cable (sizes 250 to 280).

Version for wall mounting:

Support bracket, sizes 250 to 560 and 630 to 800 with size 150 motor as ready-to-install support bracket intended for wall mounting. Support bracket made of bent round bar steel or round tube, welded and coated in black. Mounting plate and inlet ring made of sendzimir galvanized sheet steel.

Version for floor mounting:

Cube design, sizes 630 to 1000 with size 200 motor as ready-to-install cube design intended exclusively for floor mounting. Struts made of extruded aluminum sections connected to die-cast corner plates, nozzle plate and inlet ring made of sendzimir galvanized sheet steel, motor mounting plate made of coated sheet steel. This version is not suitable for wall mounting.

Any work required for isolation from structure-borne noise to be performed by the customer. Fan satisfies the applicable EMC guidelines and requirements with regard to circuit feedback (for specific information, see the respective data sheet). Documentation and marking conform to the applicable EU Directives.

Reliable performance data, air performance measurements on intake-side chamber test rig according to ISO 5801 and DIN 24163, noise measurements in anechoic rooms according to DIN EN ISO 3745.

Integrated protective devices:

- Alarm relay with zero-potential change-over contacts (250 V AC/2 A, $\cos \varphi = 1$)
- Locked-rotor protection
- Phase failure detection
- Soft start of motors
- Mains under-voltage detection
- Thermal overload protection for electronics and motor
- Short circuit protection

Optional:

- Other and specific requirements on request

FlowGrid air inlet grill

Efficient noise reduction

ebm-papst fans are not measured on our own advanced test stands just for their air performance alone. The acoustic behavior of the fans is also examined and the measurement results are included in the technical documentation.

Please note that the measurements are taken under ideal conditions with undisturbed inflow and outflow. If the fans are subsequently installed and used in devices with rather tight spaces, it is to be expected that the noise data provided in the documentation will not be applicable.

In order to minimize the negative impact of the installation situation, ebm-papst offers the FlowGrid air-inlet guard shown here. It is installed on the intake side of the fan and effectively reduces the noise generated by the fan. Particularly annoying, low-frequency noises are reduced efficiently. The level of noise reduction is dependent on the installation situation, which is why no generally applicable data is possible here.

Effects of installation space

Effects of installation space:

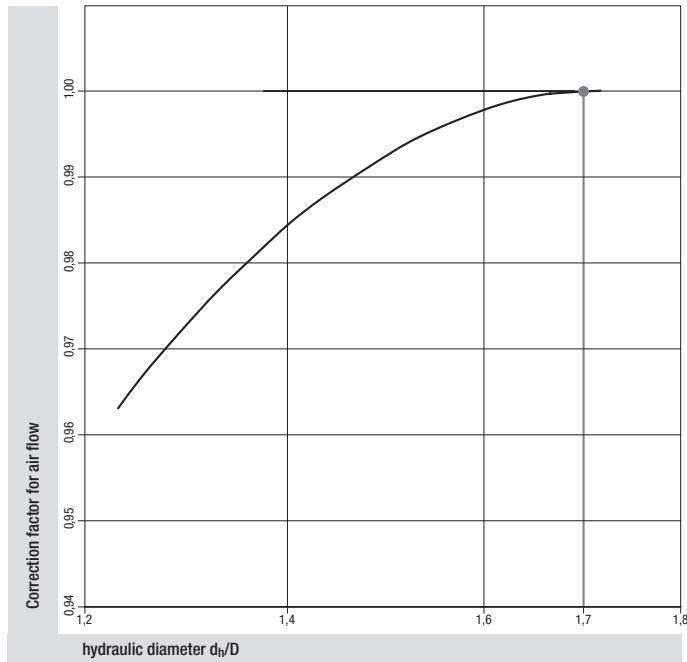

Installation in a square box may cause a reduction of the air performance.

d_h	=	Hydraulic diameter Formula: $d_h = 2 \times W \times H / (W + H)$
W	=	Width of the box
H	=	Height of the box
D	=	Outside diameter of the fan

Correction values for the air flow

Fan size 250 - 1000:

The correction values shown here were determined from an extensive series of measurements taken on our own internal chamber test rig.

Here, square and rectangular outflow cross sections were considered.

This is why the hydraulic diameter was used to determine the correction values.

The new RadiPac fans are known to be less vulnerable to tight installation situations.

For square cross sections that are greater than 1.7 x the impeller diameter, no deduction has to be applied to the catalog curves.

Air flow measurement

Air flow measurement:

The differential pressure method compares the static pressure upstream of the inlet ring with the static pressure in the inlet ring.

The air flow can be calculated from the differential pressure (between the static pressures) according to the following equation:

$$q_V = k \cdot \sqrt{\Delta p}$$

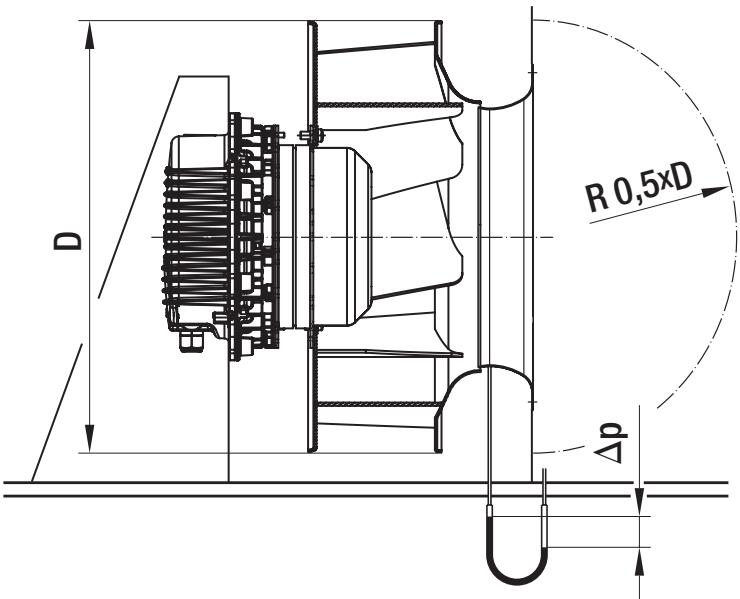

q_V in m^3/h and Δp in Pa

If the air flow is to be regulated to remain constant, the inlet pressure must be kept constant:

$$\Delta p = q_V^2 : k^2$$

k takes into account the specific properties of the inlet ring.

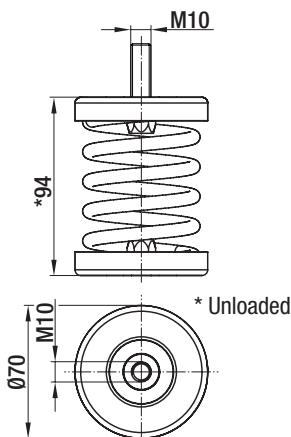

The pressure is tapped at 1 (4) point(s) on the circumference of the inlet ring. The customer connection consists of a built-in T-shaped hose fitting. The hose fitting is suitable for pneumatic hoses with an inside diameter of 4 mm.

k-factors: (for RadiPac inlet rings)

Fan size	250	280	310	355	400	450	500
k-factor	76	77	116	148	188	240	281
Fan size	560	630	710	800	1000		
k-factor	348	438	545	695	1200		

Vibration absorbers

– **Packaging:** Part numbers refer to one set consisting of 4x spring elements each.

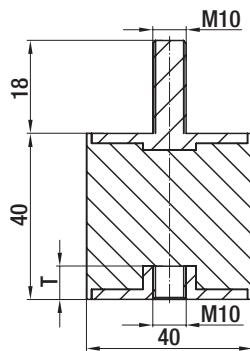

Supplied in a box.

– **For further information, see:**
Installation instructions no.: 45014-4-8670

Vibration absorbers (steel)

Part number (set)	Type	Minimum speed (rpm)	Deflection (mm)
11064-4-5142	K3G 630-PV04-01	510	7,5

Subject to change

Attention:

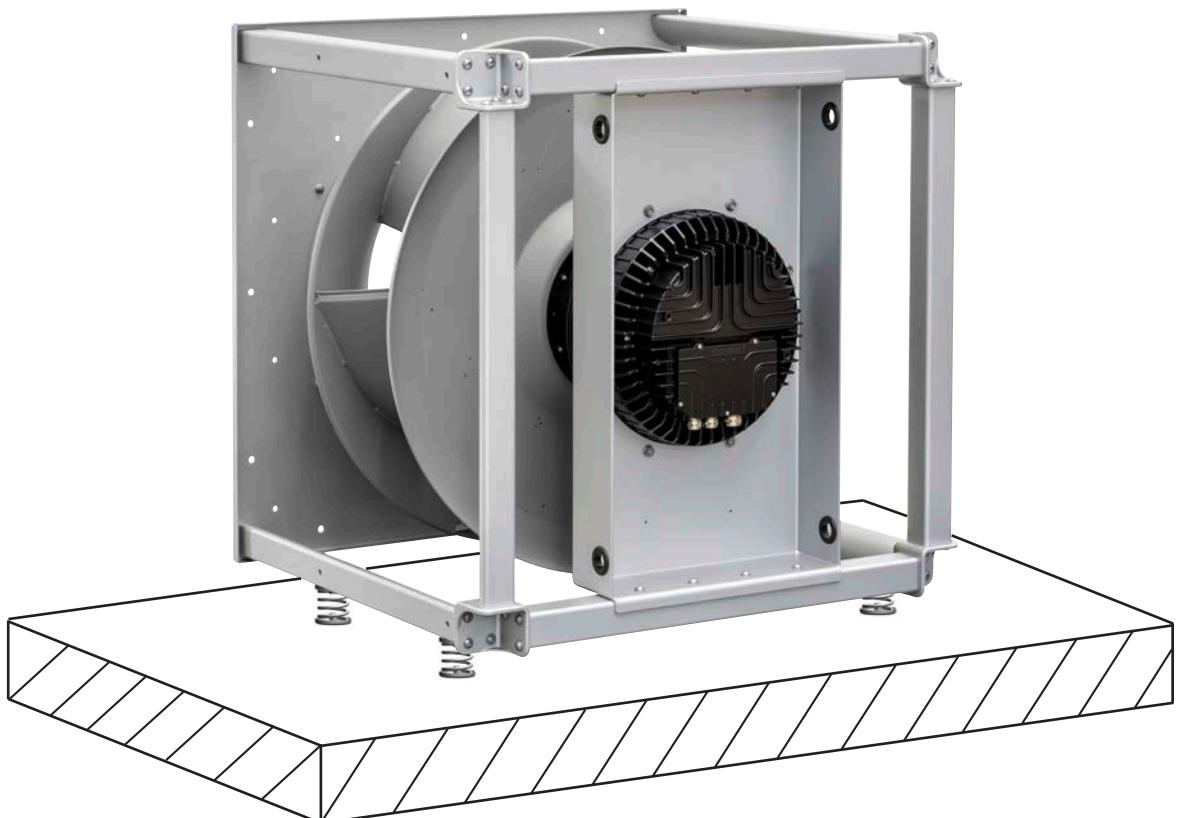

The vibration absorbers recommended by ebm-papst are available in a set of 4 pieces. The vibration absorbers are perfectly matched to their intended fans and the specified minimum speed. The installation and operation of several fans on one set of spring elements is not allowed. During start-up, the fan has to pass through the speed range corresponding to the resonance frequency (below the minimum speed). The vibrations caused by the fan's residual imbalance are strongest within this speed range. This speed range must be passed through as quickly as possible to avoid damage to the fan. Operation below, close to or at the resonance frequency will destroy the fan!

When the fan is being operated, take care to ensure that the fan's speed does not go below the specified minimum speed. This will prevent the fan from being operated continuously near the resonance frequency. The specified minimum speed is always for an individual fan without any influences from the system it is installed in.

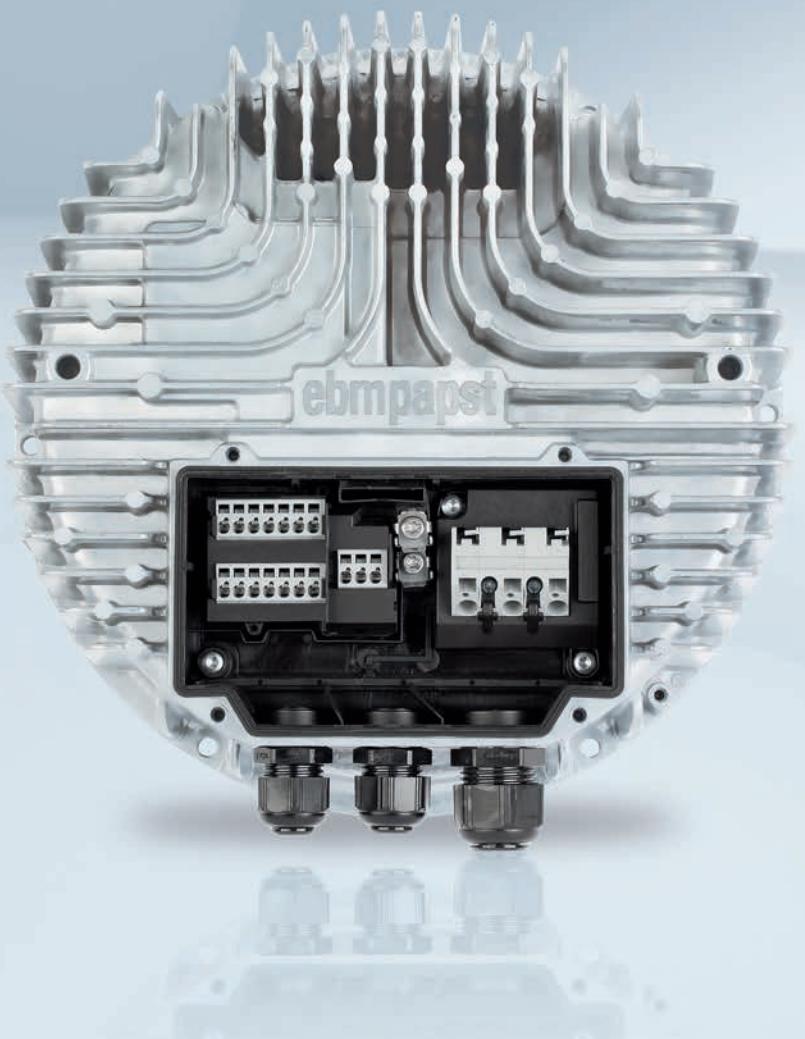

The configuration of the unit in which the fan is installed can have a strong influence on the fan's vibration characteristics, so a vibration test always has to be performed after the fan has been installed. The fan's vibration characteristics must be tested under all relevant operating conditions (such as speed, back pressure, systemic fluctuations in back pressure) – when installed and in interaction with the complete system.

The maximum vibration severity may not exceed 3.5 mm/s, measured at the motor's fastening pitch circle on the motor support plate in the direction of and perpendicular to the motor's axis of rotation.

Even when the vibration absorbers recommended by ebm-papst are used, their effectiveness must be tested in the application. If vibration absorbers other than those specified are used, tests must be performed to determine how the resonance frequency, and thus the operating requirements, change.

**Installation example:
Floor-mounted, shaft horizontal**

M3G112 & M3G150 & M3G200, 3~

Technical features:

- Control input 0-10 VDC / PWM
- Output 10 VDC (+10 %) max. 10 mA
- Output 20 VDC (+/-20 %) max. 50 mA
- Output for slave 0-10 V max. 5 mA
- Input for sensor 0-10 V or 4-20 mA
- Operation and fault indicator
- Integrated PI controller
- Locked-rotor protection / Soft start / Motor current limitation
- RS 485 MODBUS-RTU / Alarm relay
- PFC, passive (standard) or PFC, active (see product-specific catalog page)
- Thermal overload protection for electronics/motor
- Undervoltage/phase failure detection
- Control interface with SELV potential safely disconnected from supply
- External enable input/External 24 V input (parameterization)

ebm-papst FanScout

Click your way to the ideal RadiPac

With the FanScout selection software from ebm-papst, you can quickly and easily find the ideal product for your exact requirements from our extensive product range.

Fans operated in parallel, so-called FanGrids, are also included in the selection.

The software can be easily integrated into your device configuration program using the DLL interface.

Since our software is based on real measured values, the data you get with ebm-papst FanScout will always be absolutely reliable and above all extremely accurate.

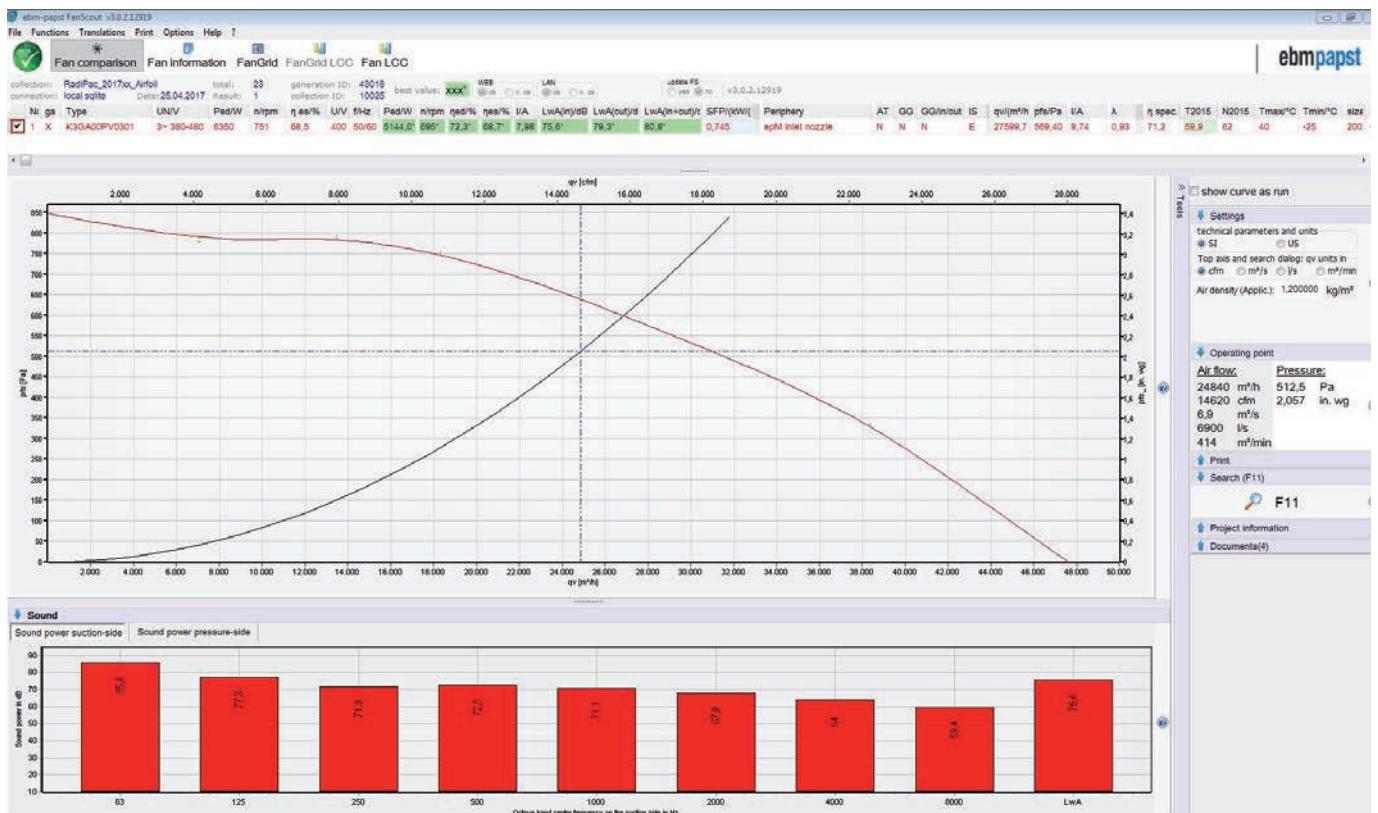

This has been confirmed by TÜV SÜD, the German technical service organization. It assigned the accuracy of FanScout's calculations in comparison with real measurements to the highest class.

In a short time, not only can you find the best solution for your use case, you can also simulate various operating scenarios that take the fans' operating points, operating times and space requirements into account to provide you with an estimate of annual energy consumption.

To make the decision even easier for you, ebm-papst FanScout also takes life cycle costs into account: the purchase price and the operating and service costs.

ebm-papst FanScout is available to our customers only.

Please contact your ebm-papst representative or call us at +49 7938 81-0.

Technical parameters and scope

High standards for all ebm-papst products

At ebm-papst we are always looking to improve our products to be able to offer customers just what they need for their particular requirements. Careful monitoring of the market enables us to constantly incorporate enhancements into our products. As shown by the technical parameters listed below, you can always be sure of finding the right solution from ebm-papst for whatever application you may have in mind.

General performance parameters

Any deviations from the technical data and technical parameters described here are given in the product-specific data sheet.

Degree of protection

The degree of protection is specified in the product-specific data sheets.

Insulation class

The insulation class is specified in the product-specific data sheets.

Installation position

The installation position is specified in the product-specific data sheets.

Condensation drainage holes

Information on condensation drainage holes is provided in the product-specific data sheets.

Mode of operation

The mode of operation is specified in the product-specific data sheets.

Protection class

The protection class is specified in the product-specific data sheets.

Service life

The service life of ebm-papst products depends on two main factors:

- The service life of the insulation system
- The service life of the bearing system

The service life of the insulation system is essentially governed by the voltage level, the temperature and the ambient conditions such as humidity and condensation.

The service life of the bearing system is primarily governed by the thermal load on the bearings. For the majority of our products we use maintenance-free ball bearings which can be fitted in any installation position. Sleeve bearings can alternatively be employed, as described in the product-specific data sheets.

As a rough guide (depending on the general conditions), the ball bearings have a life expectancy L10 of approx. 40,000 hours of operation at an ambient temperature of 40 °C.

We will gladly provide you with a life expectancy calculation based on your specific usage conditions.

Motor protection/thermal protection

Information on motor protection and thermal protection is provided in the product-specific data sheets.

The following protection methods are provided depending on the type of motor and area of application:

- Thermal overload protector, in-circuit or external
- PTC with electronic diagnostics
- Impedance protection
- Thermal overload protector with electronic diagnostics
- Current limitation via electronics

If use is made of an external thermal overload protector, a commercially available tripping unit must be connected by the customer for shut-off.

Motor protection conforming to the applicable standard must be fitted for products not provided with a built-in thermal overload protector and not protected against improper use.

Mechanical strain/performance parameters

All ebm-papst products are subjected to comprehensive testing in conformity with the normative specifications and also incorporating the extensive experience of ebm-papst.

Vibration testing

Vibration testing is performed as follows:

- Vibration test in operation according to DIN IEC 68 Part 2-6
- Vibration test at standstill according to DIN IEC 68 Part 2-6

Shock load

Shock load testing is performed as follows:

- Shock load according to DIN IEC 68 Part 2-27

Balancing grade

Balancing grade testing is performed as follows:

- Residual imbalance according to DIN ISO 1940
- Standard balancing quality level G 6.3

Should your particular application require a higher level of balancing, please contact us and specify the details in your order.

Chemical and physical strain/performance parameters

Please consult your ebm-papst contact for any questions regarding chemical and physical strain.

Areas of use, industries & applications

Our products are used in a variety of industries and for numerous applications:

Ventilation, air conditioning and refrigeration technology, clean room technology, automotive and railway engineering, medical and laboratory technology, electronics, computer and office systems, telecommunications, household appliances, heating systems, machinery and installations, drive engineering.

Our products are not intended for use in the aerospace industry!

Legal and normative specifications

The products described in this catalog are developed and manufactured in accordance with the standards applying to the particular product and, if known, in accordance with the conditions of the particular area of application.

Standards

Information on standards is provided in the product-specific data sheets.

EMC

Information on EMC standards is provided in the product-specific data sheets.

Compliance with EMC standards has to be assessed on the final product, as EMC properties may change under different installation conditions.

Touch current

Information on touch current is provided in the product-specific data sheets.

Measurement is performed according to IEC 60990.

Approvals

Please contact us if you require a specific type of approval (VDE, UL, GOST, CCC, CSA, etc.) for your ebm-papst product.

Most of our products can be supplied with the applicable approval.

Information on existing approvals is provided in the product-specific data sheets.

Air performance measurements

All air performance measurements are conducted on intake-side chamber test rigs conforming to the requirements of ISO 5801 and DIN 24163. The fans under test are attached to the measuring chamber with free air intake and exhaust (installation category A) and operated at nominal voltage, with alternating current also at nominal frequency, without any additional attachments such as a guard grill.

As required by the standards, the air performance curves shown are referenced to an air density of 1.15 kg/m^3 .

Technical parameters and scope

Air and sound measurement conditions

Measurements on ebm-papst products are taken under the following conditions:

- Axial and diagonal fans in airflow direction "V" in full nozzle without guard grill
- Backward-curved centrifugal fans, free-running with inlet ring
- Forward-curved single and dual-inlet centrifugal fans with housing
- Backward-curved dual-inlet centrifugal fans with housing

Sound measurements

All sound measurements are taken in anechoic rooms with reverberant floor. ebm-papst acoustic test chambers meet the requirements of accuracy class 1 as per DIN EN ISO 3745. For sound measurement, the fans being tested are positioned in a reverberant wall and operated at nominal voltage, with alternating current also at nominal frequency, without any additional attachments such as a guard grill.

Sound pressure and sound power level

All acoustic values are determined in accordance with ISO 13347, DIN 45635 and ISO 3744/3745 as per accuracy class 2 and given in A-rated form.

For measurement of the sound pressure level L_p the microphone is located on the intake side of the fan being tested, generally at a distance of 1 m on the fan axis.

For measurement of the sound power level L_W 10 microphones are distributed over an enveloping surface on the intake side of the fan being tested (see graphic). The measured sound power level can be roughly calculated from the sound pressure level by adding 7 dB.

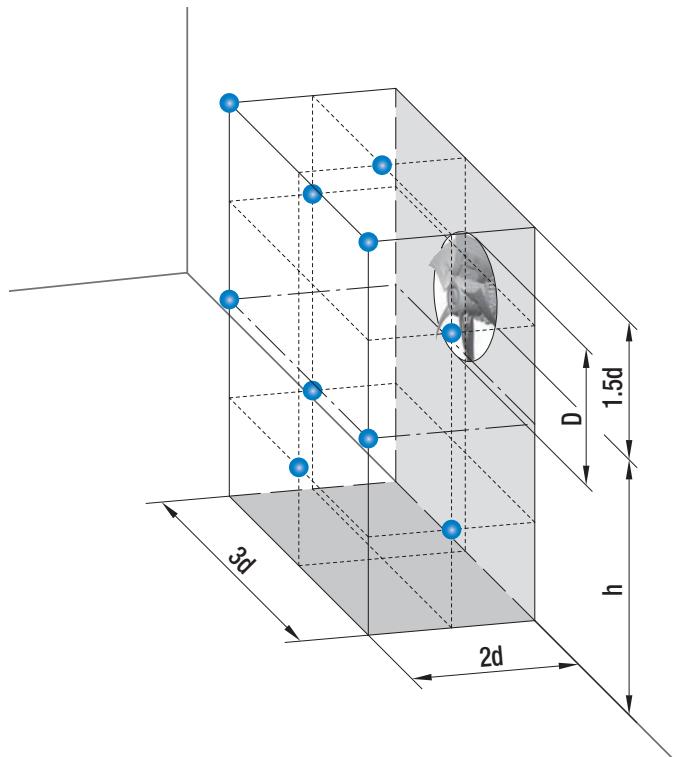

Measurement set-up according to ISO 13347-3 and DIN 45635-38:

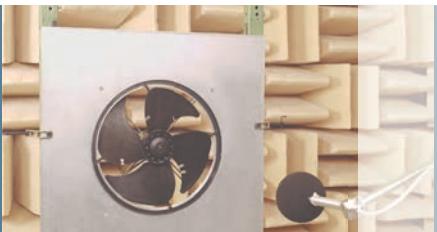

- 10 measuring points

$$d \geq D$$

$$h = 1.5d \dots 4.5d$$

$$\text{Measurement area } S = 6d^2 + 7d(h + 1.5d)$$

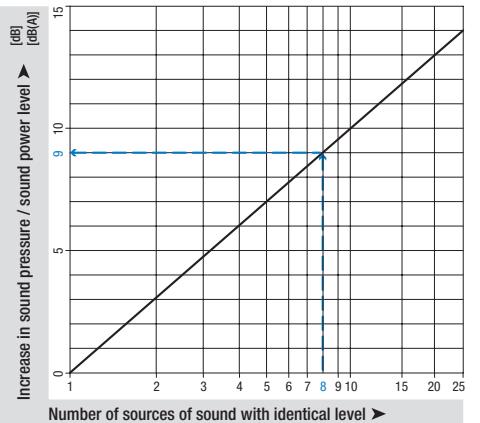

Cumulative level of several sound sources with the same level

The addition of 2 sound sources with the same level produces a level increase of approx. 3 dB.

The noise characteristics of several identical fans can be predicted on the basis of the sound values specified in the data sheet. This is shown in the adjacent graph.

Example: There are 8 axial fans A3G800 on a condenser. According to the data sheet, the sound pressure level of one fan is 75 dB(A). The level increase determined from the graph is 9 dB.

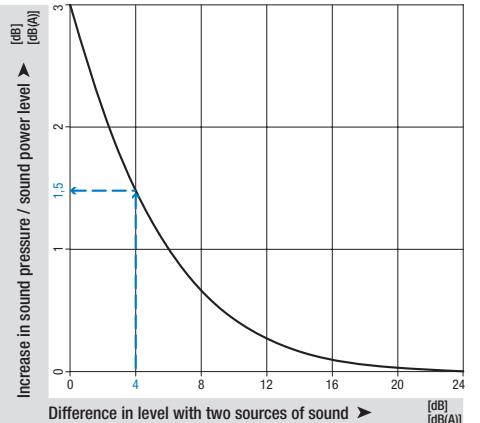

This means that a total level of 84 dB(A) is to be expected for the installation.

Cumulative level of two sound sources with different levels

The noise characteristics of two different fans can be predicted on the basis of the sound values specified in the data sheet. This is shown in the adjacent graph.

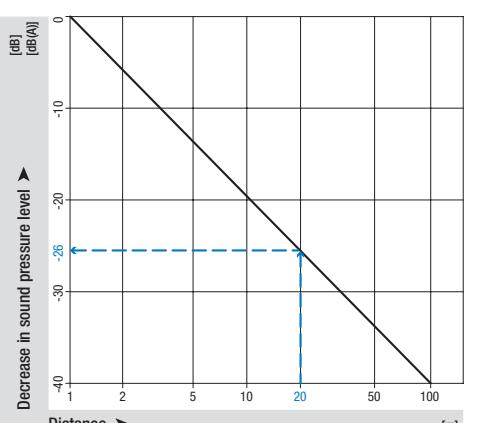

Example: In a ventilation unit, there is one axial fan A3G800 with a sound pressure level of 75 dB(A) at the point of operation and one axial fan A3G710 with 71 dB(A). The difference in level is 4 dB. The level increase of approx. 1.5 dB can now be read off the graph. This means that a total level of 76.5 dB(A) is to be expected for the unit.

Distance laws

The sound power level is not governed by the distance from the noise source. By contrast, the sound pressure level decreases with increasing distance from the sound source. The adjacent graph shows the decrease in level under far field conditions. Far field conditions apply if there is a considerable distance between the microphone and the fan in relation to the fan diameter and the wavelength under consideration. On account of the complexity of the topic, literature should be consulted for more detailed information on far fields. The level in the far field decreases by 6 dB each time the distance is doubled. Different relationships apply in the near field of the fan and the level may decrease to a far lesser extent. The following example only applies to far field conditions and may vary considerably as a result of installation effects:

For an axial fan A3G300, a sound pressure level of 65 dB(A) was measured at a distance of 1 m. From the adjacent graph, this would yield a reduction of 26 dB at a distance of 20 m, i.e. a sound pressure level of 39 dB(A).
